Because independence matters

Stair Rail Supports

Where a stud or weak wall prevents the safe attachment of a stair handrail, our stair rail supports are the solution.

Fixing firmly to the stair tread, the stair rail support is attached to the handrail via a swivel bracket. Suitable for all stair gradients, it also fits around corners and half landings.

Being height adjustable, the stair rail support can support people of all heights and weights. Its unique swan neck design prevents hands from being pinched against the wall.

Simple to install and remove, stair rail supports can quickly improve the usability of any stairs with minimal disruption. They're also easy to store and refurbish for reuse, making for a budget friendly, environmentally conscious and safe solution.

SPECIFICATION

Height adjustable	840-1200mm (33-47½in)
Base plate	70 x 200mm (8in x 2.75in) for solid stair tread fixing
Adjustable bracket	Swivel bracket adapts to stair angle
